Subject: Updated material references

Dear Brady Customer,

Brady wants to inform you that Brady materials B-480, B-486A & B-489 will have an updated material reference.

Due to a non-conformity with UL follow up testing, the maximum temperature rating for the metal surfaces needed to be lowered. Because of lowering the maximum temperature rating, UL requires a designation change for the materials:

B-480 will become B-480A
B-486A will become B-486B
B-489 will become B-489A

The material characteristics do not change, nor will the TDS be updated.

We are committed to a successful transition, while providing you the best possible products. Should you have any further questions, please contact your supplier of Brady materials.

Thank you for your understanding and continued support of Brady.

Sincerely yours,

David Verloes
